NEW Hard Resin

NEW Polycarbonate

Special Instructions:

- Teflon® Clear Coat Lenses feature a special super-hydrophobic and oleophobic layer that is 10 times easier to clean and extremely smooth. To prevent slippage during edging it is important to use lens pads appropriate for super-hydrophobic AR coatings. Contact your Rx Laboratory for recommended edging supplies and/or edging pad recommendations.
- Please consult your Teflon® Clear Coat Lenses approved Rx Laboratory regarding standard tint availability on CR-39® and Spectralite® materials.
- UV dyes are not approved with Teflon® Clear Coat Lenses.
- Hard coating of bifocals and trifocals will almost always result in fine drip lines or coating runs off the segment. The extent of drip lines or coating runs will depend on the addition power or segment size, or a combination of both, and are comparable to other coated lens cosmetics on the market. Please consult your Rx Laboratory regarding bifocal/trifocal availability.
